moe-based applications? This is intended to be a comprehensive review of the new 5th release of the Acid Pro music notation software for both PC and Mac. I have used it for about two weeks on both my PC and Mac, and I have gone through all the functions of the app, from understanding the basic theory of music notation and the interface, to learning the quirks of the application and using them to express my musical ideas. Here's a quick summary of what's new in this version. Functionality Although Acid Pro is a great tool for students, musicians, and anyone who wants to use music notation, the difference between this version and previous versions is in the ease of use. The newer interface is fast and responsive, and the document editor is more user-friendly. From the iTunes Notes tab in the upper menu bar, it is relatively easy to add notes and comments to the existing composition, and even re-arrange the sequence of the notes. (This is actually much faster than on previous versions, where you have to import a file with the composition already in the right place, and then re-arrange everything manually.) But the best feature of this release is the ability to write music notation from scratch on both PCs and Macs, with either a keyboard or a computer keyboard on one side of the app window. Interface This new version has a clean, dark design with some very classy app icons and a gloss, glossy feel to it. The interface is similar to other.moe based applications, like Lumen and the new Sony Music Software Music Notation Studio. I would say the interface is pretty standard and, again, like other.moe applications, you can customize most of the UI and icons, which can make the application look pretty much like any other application you choose. I don't have enough experience with the application to tell you how easy it is to learn. But the tutorial (which comes with the product) shows you the basics pretty quickly, and there is a reference manual which you can get to from the help menu, which really tells you how to perform the basics of note entry. I really like the interface in this version; it's quite intuitive. Controls If you've used any.moe application, then you know how to move the cursor around the page, move the line of music down and up, or use the cross-hair cursor to select a portion of the music, and then click on the 82157476af
